

ENVIRONMENTAL POLICY

Since its establishment, [Rammos Managed by Dedeman](#) has demonstrated a strong commitment to protecting the environment and preserving natural resources. Through our continuous environmental responsibility initiatives, we have proudly earned the Zero Waste Certificate, reflecting and reinforcing our dedication to sustainable and environmentally friendly practices.

At our property, we are committed to protecting the environment, preventing pollution, and continuously reducing our negative environmental impacts.

For this purpose, we are committed to the following principles:

1. Within the framework of legal regulations, we assess the environmental impact of our operations and continuously develop methods to minimize and reduce potential harm.
2. We take preventive measures against accidents or incidents that may cause pollution or environmental damage.
3. We carefully separate waste according to its source, category, and hazard classification to maximize recycling opportunities, ensure safe disposal processes, and reduce overall waste generation.
4. We continuously improve our purchasing processes by selecting products and materials that generate less waste and aim to reduce waste production year by year.
5. We recognize that hazardous substances and chemicals should only be used when necessary and in the required amounts, minimizing both environmental impact and waste generation.
6. We carefully plan food and beverage production according to guest occupancy levels to reduce food waste, while ensuring that healthy surplus food is evaluated and utilized responsibly within or outside the property whenever possible.
7. We contribute to protecting nature by prioritizing products and materials carrying “*recyclable*” and “*environmentally friendly*” labels, while actively creating opportunities for reuse.
8. We carefully control the use of single-use materials such as paper products, napkins, toilet paper, packaging materials, and similar consumables, ensuring only necessary consumption and minimizing waste generation.
9. We ensure that all generated waste is effectively separated according to its source, waste category, and hazard classification for proper processing and disposal.
10. We ensure awareness regarding the proper use of waste separation units located in public areas and designated waste storage zones throughout the property.
11. We store waste safely according to its characteristics, maintain separation standards, and ensure delivery to licensed and authorized waste management companies within legally required storage periods, while maintaining complete documentation records.

12. Together with our designated environmental officer, we regularly update our waste management plan within legal timeframes and complete all official environmental reporting obligations in accordance with regulatory requirements.

13. Through annual training programs, we educate all employees on environmental awareness and continuously monitor our environmental performance through regular monthly inspections.

14. We strive to use water, energy, and all natural resources efficiently and responsibly. We actively share this awareness with our employees, guests, and suppliers.

15. We continuously measure our environmental management performance, monitor progress through measurable sustainability goals, and work consistently to improve our environmental performance.

16. We are committed to educating our employees on environmental responsibility and increasing environmental awareness throughout our organization.

17. We actively encourage both our guests and employees to participate in our environmental protection and waste management policies, promoting this philosophy as part of a sustainable lifestyle culture.

Through these commitments, we aim not only to protect today's environment, but also to preserve a sustainable future for generations to come.
